## WORLDWARE SETS TOUGH PRODUCT GUIDELINES FOR EATOILS™ PRODUCTS

Most products on the market today don't stand up to the rigorous requirements of our **EATOILS™ PRODUCT GUIDELINES** – here they are for your information:

- 1) **PERFORMANCE** - Our **EATOILS™** products must be exceptional at the job they are designed for – deliver the best results we have seen compared to competitive products.
- 2) **ENVIRONMENTALLY FRIENDLY** - Our **EATOILS™** products must be safe for the environment.
- 3) **NATURAL** - Our **EATOILS™** biochemical products must be naturally based, using naturally occurring microbes – no genetically altered microbes.
- 4) **SAFE TO USE** - Our **EATOILS™** products must be safe for the user – must pass the 'hand and clothing' test and be safe to use and handle – safe for WHMIS.
- 5) **COST EFFECTIVE** - Our **EATOILS™** products must be concentrated and cost effective alternatives to other products in use today. Our per dose product costs must be competitively priced to provide a viable alternative to other products on the market.
- 6) **HIGHEST QUALITY** - Our **EATOILS™** products must be produced under stringent quality controlled conditions so that our product quality is consistent and repeatable.

**EATOILS™** products, using proven technology, are designed to naturally break down organic waste and convert it into harmless material that will easily flow through the sewage system and actually help the local water treatment plant.

Compared with traditional harsh chemical compounds, the comprehensive line of **EATOILS™** products has delivered superior results in tough applications such as: 1) grease trap & drain treatment, 2) septic & portable toilet maintenance, 3) equipment & floor degreasing & cleaning, 4) carpet & upholstery cleaning, 5) bathroom surface cleaning & deodorizing, 6) oil stain removal for drive-thru & parking areas, 7) pond clarification & waste water treatment and 8) bioremediation of contaminated soil & water.

Industrial facilities, food processors, institutions, hotels and retail food establishments around the world can use **EATOILS™** concentrated products for their toughest cleaning and deodorizing applications.

For further information contact your local **EATOILS™** distributor or . . .
